## INTRODUCTION

The long and painful Mai Pake or leprosy history of Kalaupapa began in 1865 when King Kamehameha V signed into law an "Act to Prevent the Spread of Leprosy" enforcing segregation of people afflicted with the disease. The Board of Health established an isolation settlement at Kalaupapa — a Molokai peninsula, enclosed by the sea on three sides and blocked from the rest of the island by a precipitous pali.

Perhaps the chapter "Starving Village" in Michener's fictional "Hawaii" gives the most telling written impression of the century of isolation and separation, but the strangely beautiful, peaceful Kalaupapa, its quaint structures, and friendly people is the effective setting to put a dreaded disease and a more dreaded treatment into a perspective.

Now that sulphone drugs arrest the disease and its contagion in the United States, Hansen's Disease is no longer treated by enforced isolation and separation from society. But in many places elsewhere patients are still kept in isolated, separated colonies for life. Perhaps as a Historical Park noted worldwide Kalaupapa may replace some fear of leprosy with understanding.

## Legislative History

Kalaupapa National Historical Park was established on December 22, 1980 by Public Law 96-565. Major provisions of Public Law 96-565, as related to this plan, are to provide for the preservation of the unique nationally and internationally significant cultural, historic, educational, and scenic resources of the Kalaupapa settlement on the island of Molokai.

The Congress declared the following to constitute the principal purposes of the park:

- (1) to preserve and interpret the Kalaupapa settlement for the education and inspiration of present and future generations;
- (2) to provide a well-maintained community in which the Kalaupapa leprosy patients are guaranteed that they may remain at Kalaupapa as long as they wish; to protect the current lifestyle of these patients and their individual privacy; to research, preserve, and maintain important historic structures, traditional Hawaiian sites, cultural values, and natural features, and to provide for limited visitation by the general public;

Earlier, Public Law 94-518, October 17, 1976, had directed the Secretary of the Interior to study Kalaupapa as a possible addition to the National Park System and established a Kalaupapa National Historical Park Advisory Commission to conduct the study. Their efforts culminated in a "Report of the Kalaupapa National Historical Park Advisory Commission to the

Secretary of the Interior," April 1980, which now serves as the General Management Plan for the park.

The Kalaupapa National Historical Park Advisory Commission was established by Public Law 96-565. Largely composed of patients who live at Kalaupapa, the Commission remains intimately involved with park plans and operations.

As established, the park differs radically from any others in the system in that (1) a living community of people from the historical period still reside there, and (2) nearly all the park land will remain in non-federal ownership, operated instead by a series of cooperative agreements. To date, an agreement has been reached with the United Foundation (who owns Protestant Church structures); there are nearly completed agreements with Hawaii Department of Health and the Catholic Church; there is an insurmountable difficulty with Hawaiian Homes Commission lands which seemingly can only be remedied by legislation.

#### Interpretive Theme

From 1866 until 1969, people inflicted with leprosy or Hansen's Disease were quarantined for life on the isolated Kalaupapa peninsula.

Kalaupapa's main interpretive theme is its people's courage, faith, unselfish aloha, and perseverance despite affliction with the world's most dreaded disease and of their enforced separation from family and friends to Molokai for life. Further, as an internationally acclaimed Historical Park revealing knowledge and understanding of leprosy patients, Kalaupapa widely publicizes that ordinary medical treatment -- rather than exile in isolation -- should be the human standard to deal with leprosy worldwide.

#### OVERVIEW AND NEEDS

##### The Cultural Setting of Kalaupapa National Historical Park

The cultural history of Kalaupapa is particularly rich. Human occupation of the park area extends from prehistoric times (before 1778) to the present. A sizeable Hawaiian population occupied at least a portion of the park from prehistoric times to the early historic period (A.D. 1778-1866). Remnants of that population continued to occupy a portion of the park after the leprosy settlement was established at Kalawao in 1866. With the establishment of the leprosy settlement, the park entered the first of three historic periods.

These include the Pioneer Kalawao Period (1866-1873) from the initial landing of leprosy patients to 1873 during King Lunalilo's reign. The second period, the Kalawao Settlement Period (1873-1911), includes the development of Kalawao Settlement and the United States Leprosy Investigation Station. The third period is the Kalaupapa Settlement

Period (1911-present), during which Kalawao Settlement was abandoned and Kalaupapa Settlement developed.

Physical remains from all these periods, prehistoric and historic, are still extant within the park. These include hundreds of stone features, Molokai Lighthouse, two churches in Kalawao, approximately 400 structures in Kalaupapa Settlement, and numerous cemeteries, both marked and unmarked.

#### Status of Cultural Resources Inventory

##### Archeology

Cultural resources are located throughout Kalaupapa Peninsula and Waikolu Valley and have even been recorded in the portions of the park on top of the Pali. Archeological resources, both prehistoric and historic, are highly visible in those portions of the park that are not overgrown with Christmas berry, haole koa, and lantana. In spite of this rich resource base, no systematic archeological inventory has been conducted within the park. Individuals, including John F. G. Stokes, have made cursory inspections of portions of the park, however.

By 1971 when a site compilation for all sources was done, 28 resources of the pre-contact period had been recorded within the authorized boundaries of the park. Twenty-three of the 28 resources had designated site numbers. In 1974 an attempt to relocate the sites with site numbers resulted in only four being relocated.

The 1974 study should not be taken as an indication of the extent of existing resources within the park, however. It is unknown whether or not the two "topside" sites were included in the 1974 relocation efforts and one site that was not recorded as having been relocated in 1974 is clearly visible in aerial photographs taken in 1975. In addition, archeological surveys and base maps for the park are incomplete and inadequate. Many more archeological sites exist than have been recorded.

In late 1983 and early 1984, as part of the planning process for Phase II of the Water Distribution System for Kalaupapa, the Pacific Area Office conducted the first systematic archeological survey undertaken at Kalaupapa. The project was supervised by Pacific Archeologists Edmund Ladd and Gary Somers and covered the area from the mouth of Waihanau Valley to the water tanks and from there to the settlement of Kalaupapa. Numerous archeological features were identified and mapped, including a heiau and a large, multi-room dry laid, masonry structure. Future archeological surveys will be tied into the grid system that was established during this project.

The amount of research that has been conducted is inadequate for resources preservation, management decisions, and interpretive purposes. We know

the resource base is large and includes both prehistoric and historic resources. We know there are features associated with living areas, ceremonial areas, agriculture, animal husbandry, fishing, and burial areas. We do not know the number, nature, extent, or interrelationships of these features, either synchronically or diachronically. Given the quantity and quality of archeological research that has been documented to date, no informed decisions can be made regarding resources preservation, resources management, or interpretation.

### History

The status of the inventory of historic resources is better than it is for archeological resources. This is especially true of the buildings. A three-volume Building Inventory was completed by the NPS in 1977 and Laura E. Soulliere and Henry G. Law completed an evaluation of the architectural significance of the buildings in 1979. Table 1, "Ownership of Kalaupapa Structures" lists structure number, name, ownership, and maintenance responsibility for structures within the park.

Two private citizens have also contributed a great deal to our understanding of Kalaupapa's history.

Anway Skinsness has done extensive historic research at Kalaupapa and has interviewed many of the patients. She is currently writing a book concerned with the history of Kalaupapa. Bruce Doneux has spent a great deal of time locating, inventorying, and copying historic documents and photographs that pertain to Kalaupapa. He also organized the Kalaupapa Historical Society. Both of these individuals were supported by grants from the Lani Booth Foundation.

Finally, Linda Greene recently completed her research for the Historic Resource Study. Her report, which is in preparation, should address the historic significance of the buildings at Kalaupapa and discuss their uses and dates or periods of construction.

Except for two areas (oral history and an historic structures report for St. Philomena Church), the historic research that has been completed (once Linda Greene's Historic Resource Study is completed) appears to be adequate for resources preservation, management decisions, and interpretive purposes.

### Status of Socio-Cultural Resources Inventory

From May 1977 to March 1978 Ted Gugelyk, University of Hawaii, interviewed many of the patients at Kalaupapa in an attempt to record the life-long social experiences in relation to leprosy of each patient. In 1979, 25 interview excerpts were published in the book, Ma'i Ho'oka'awale The Separating Sickness, by Ted Gugelyk and Milton Bloombau. The result is a social history of Kalaupapa based on the experiences of some of the patients. The research Anway Skinsness has been doing is also focused on the social history of Kalaupapa.

maintenance or stabilization treatment will literally be gone within four weeks! It is recommended listing that any structure not receiving them all. The treatment adequate funding to stabilize and preserve essential because there is not enough to stabilize information. The priorities are in Historic Architect Henry Law's on-site information. The priorities are information in Souliere and Law, 1979; Cox's priorities; Apple 1981; and As shown in Appendix A, the priorities are developed using the extensive

the derivation of these priorities.

listing in column I becomes particularly significant. Appendix A traces and maintenance all of the remaining structures in the park, the "priority" that it has been nominated. Because it will be impossible to stabilize structures, National Registry status. "R" signifies on the Register; "N" respondsibility of buildings at Kalauapapa, "additionality amontates the

Table 2, "Priority, Adaptive Use, Treatment, and Maintenance Lighthouse. The list is incomplete, however, and needs to be updated.

patient's residences to St. Philomena Catholic Church to the Molokai range from a lava rock shelter to the ruins of the U. S. Leprosy Hospital sites included on the List of Classified Structures for Kalauapapa. These sites are currently 47 buildings, 1 archaeological ruin, and 5 historic

management decisions, or interpretive purposes.

present. Research to date is inadequate for resources preservation, or re-establishment within the park once the leprosy population is no longer what, if any, traditional use activities that group would like continued ranging ethnographic field studies need to be conducted to determine see continued within the park. For the native Hawaiian population, wider use activities that are important to the patients and which they wish to addditional interviews with the patients could identify those traditional

nature of the disease and restrictions placed on them by society. different traditional use activities from the first group due to the 1860's. The second group, the leprosy population, probably established at least severely restricted over most of the park area since the late population, has had its traditional use activities largely eliminated or two separate groups of people. The first group, the native Hawaiian when we address traditional use activities for Kalauapapa, we must look at

activities within Kalauapapa. Health has controlled and limited access to Kalauapapa and has regulated Hawaian population was largely removed and relocated elsewhere on and 1860's. When the leprosy colony was established in 1866, the remnant greatly reduced by a series of epidemics that swept Hawaii in the 1850's at Kalauapapa and in Wai'olu Valley until the 1850's, that population was Kalauapapa. Although there was a large native Hawaiian population living resources. These types of resources will be difficult to identify at nevertheless none of the research to date has dealt with socio-cultural

or five more years. Perhaps it can be rationalized that the priority list is always subject to review and revision -- if without maintenance any of the lower priority structures remain intact for further consideration. Quite likely Table 2 is the most significant section of this plan; it is a self-fulfilling prophecy.

#### Status of Museum Catalog

A Collection Preservation Guide was prepared in February 1983 by the Curatorial Services Division. The requirements for a museum catalog are discussed in that document. At the present time, no museum catalog exists for Kalaupapa because the park has no staff and the National Park Service owns no objects or artifacts from the park. Except for 22 acres around the lighthouse, the National Park Service owns none of the land within the authorized boundaries of the park and there are no plans for the Service to acquire any more land. Pursuant to the enabling legislation, P. L. 96-565, the Service is seeking to enter into cooperative agreements with the property owners within the park so that the Service can manage the park and its resources accordingly.

Once basic agreements are signed, the issue of object and artifact ownership will need to be addressed -- perhaps. (Other issues are paramount now.)

#### National Register Listings

The National Register listings can be considered both complete and incomplete. The listing is complete in the sense that the entire park is listed on the National Register as a National Historic Landmark (Kalaupapa Leprosy Settlement). The U. S. Coast Guard Molokai Lighthouse is listed separately on the National Register.

The listing is incomplete in the sense that no comprehensive cultural resource inventory of the park has ever been made. Although the National Historic Landmark status is based upon both historic and archeological resources, our knowledge of the archeological resources is particularly fragmentary. Until we have completed an inventory of all the resources in the park, both historical and archeological, the National Register listing must be considered to be incomplete.

#### Resource Needs

For the most part, the 400 or so structures remaining of the historic period are wooden, laced with ground and air termites, rot, mildew, and encroaching tropical vegetation. Uncared, such a structure disappears in five or so years. If wood of an abandoned structure is of termite resistant quality, it is frequently "recycled" into a new shed or garage elsewhere.

Archeological ruins are now crumbled by a host of newly introduced exotic shrubs and trees -- haole koa, Christmas berry, and lantana. These species now cover 90% of the peninsula. This is a new phenomena at Kalaupapa and likely the standing ruins will be quickly toppled without some type of care.

During 1982 and 1983, the National Park Service made extensive stabilization efforts to highest priority historic structures. Primarily, efforts were to fumigate, paint exteriors, and fix roofs to prevent further damage by termites and moisture. These stabilization efforts are listed in Table 3, "Stabilization Work Done to Kalaupapa Structures in 1982 and 1983."
